

PROCREATE

LIGHT BRUSHES

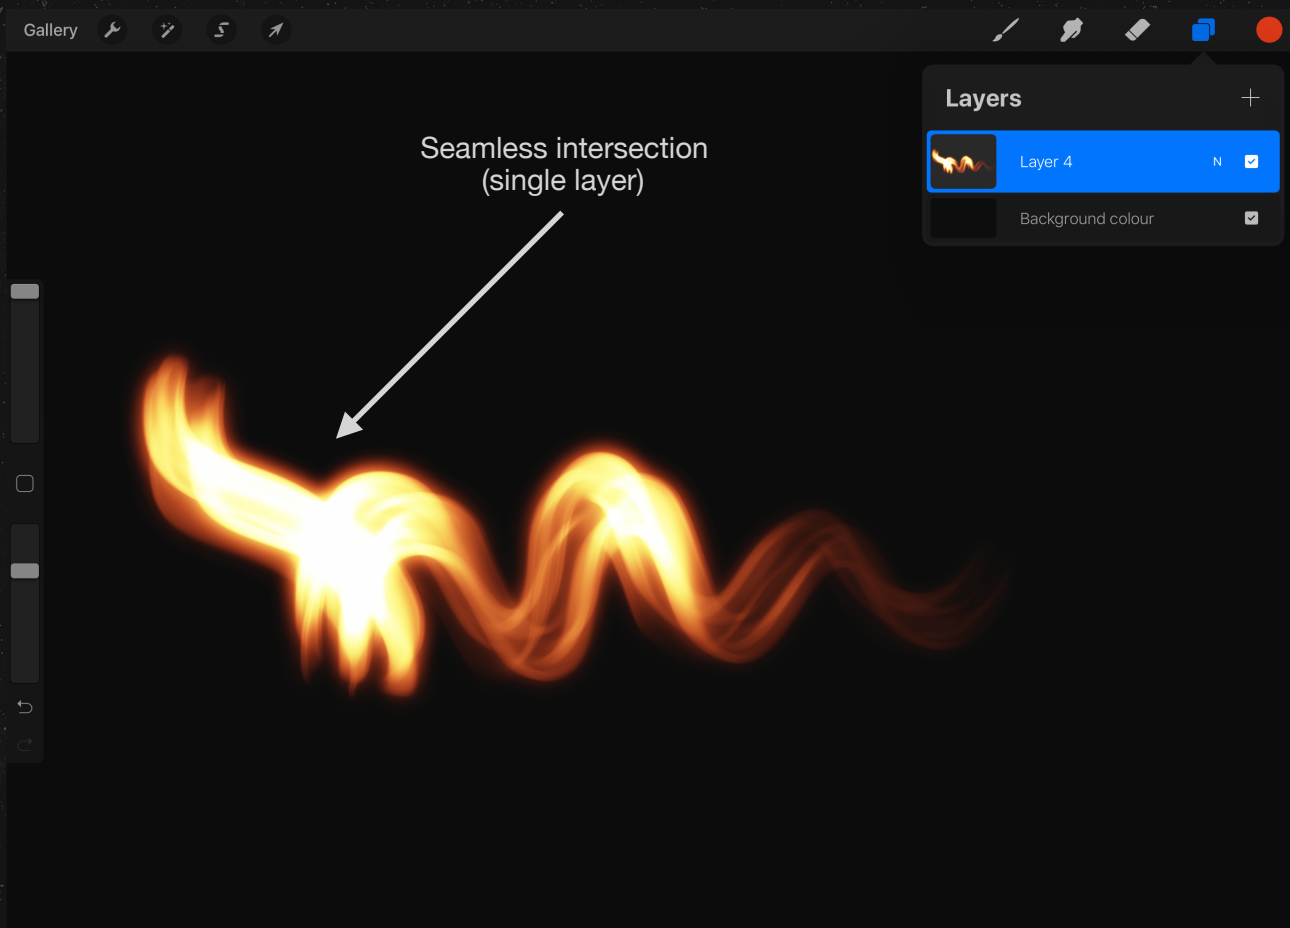

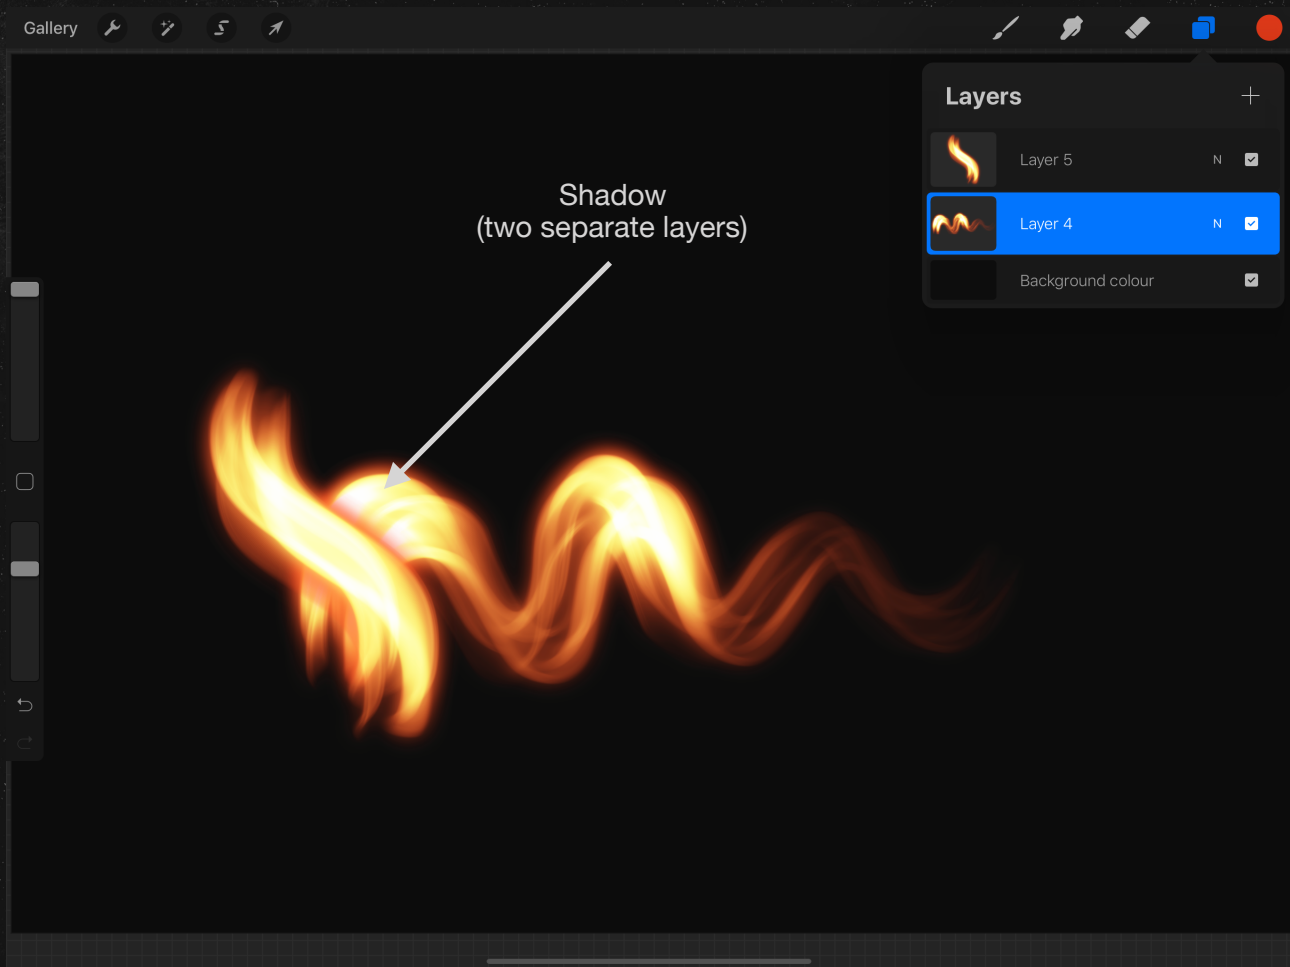

QUICK TIPS

Thanks a lot for purchasing these Procreate brushes!
Here are a few tips for using the brushes.

TIP #1 To add a glow effect to your designs, create a new layer and place it below your design. Then, paint using the Bloom brush to create the glowing look.

TIP #2 Depending on the color you select, you may notice some “shadows” appearing at the intersection of brushstrokes when using several layers. If you want a seamless stroke, I suggest using only one layer (feel free to duplicate the layer for each step and toggle its visibility off so you have a backup in case you’d like to go back to the previous version).

TIP #3 To get the light/glowing effect, the brushes have a built-in blending mode, which is the blending mode “Add”. But if you want, you can modify this blending mode in the brush parameters. To do so, tap the brush thumbnail, then go to the “General” tab, and finally the parameter “Blend mode”. Here you’ll have access to all the different modes. Note: the modes in the “Lighten” category are the ones that are used to get glowing effects. Here are a few examples using the same brush and same color:
